Creating a Google Pay & Wallet Console Account

Wallet Platform · https://www.walletthat.com/help/creating-a-google-pay-wallet-console-account/

How to Create a Google Pay & Wallet Console Account

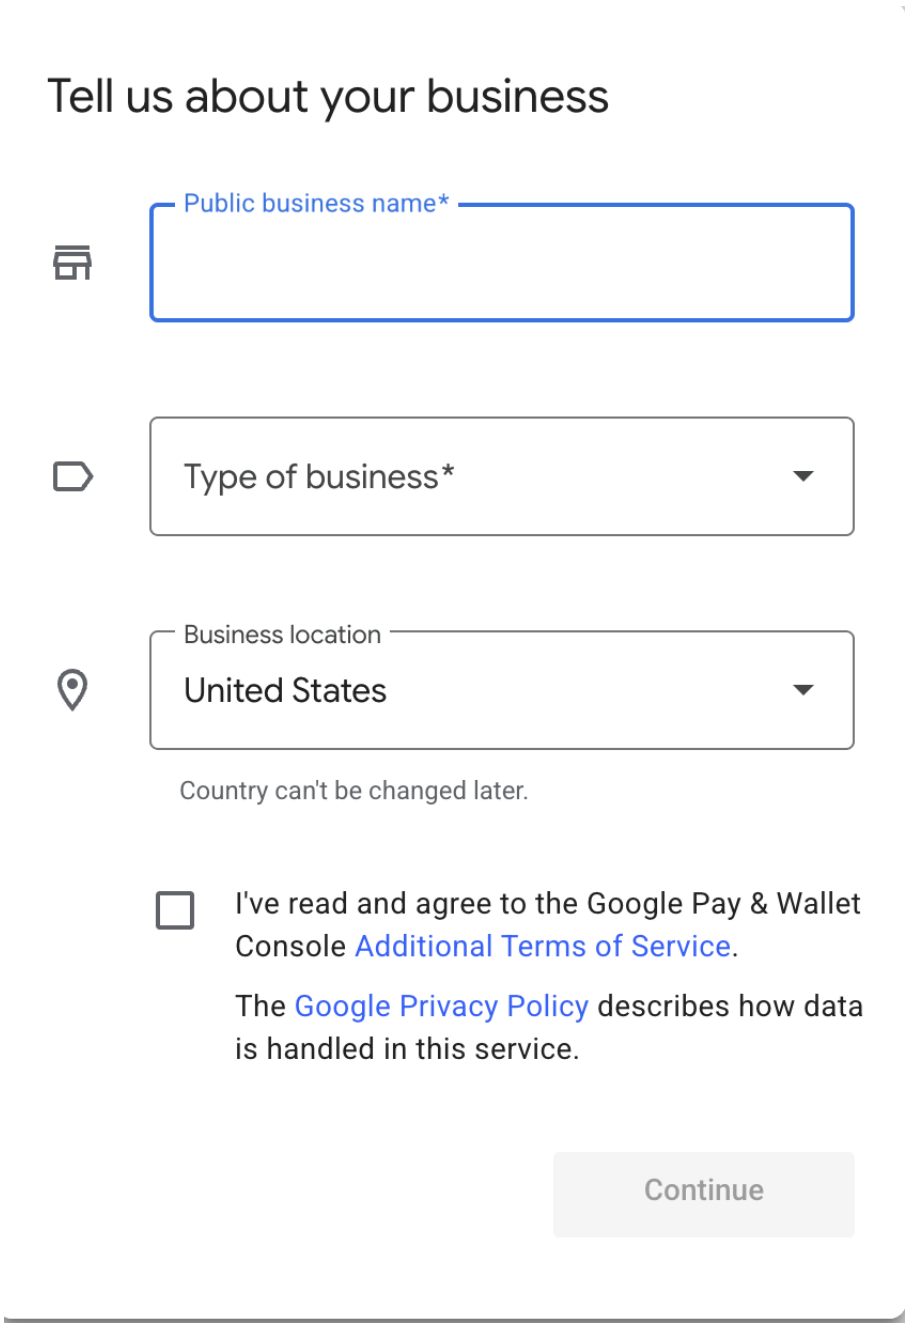

Before you can start issuing Google Wallet passes, you need to set up a Google Pay & Wallet Console account. This is where you register your business, get your Issuer ID, link the standard WalletThat service account email address, and control who has access to your account.

Step 1: Go to the Google Pay & Wallet Console Account Homepage

Go to: pay.google.com/business/console and fill out the following three required fields:

1. Public Business Name
2. Type of Business - This will typically always be "Merchant" as "Financial Institution" is for banks only.
3. Business Location

After filling out those three fields, you will just need to agree to Google's terms and then click "Continue".

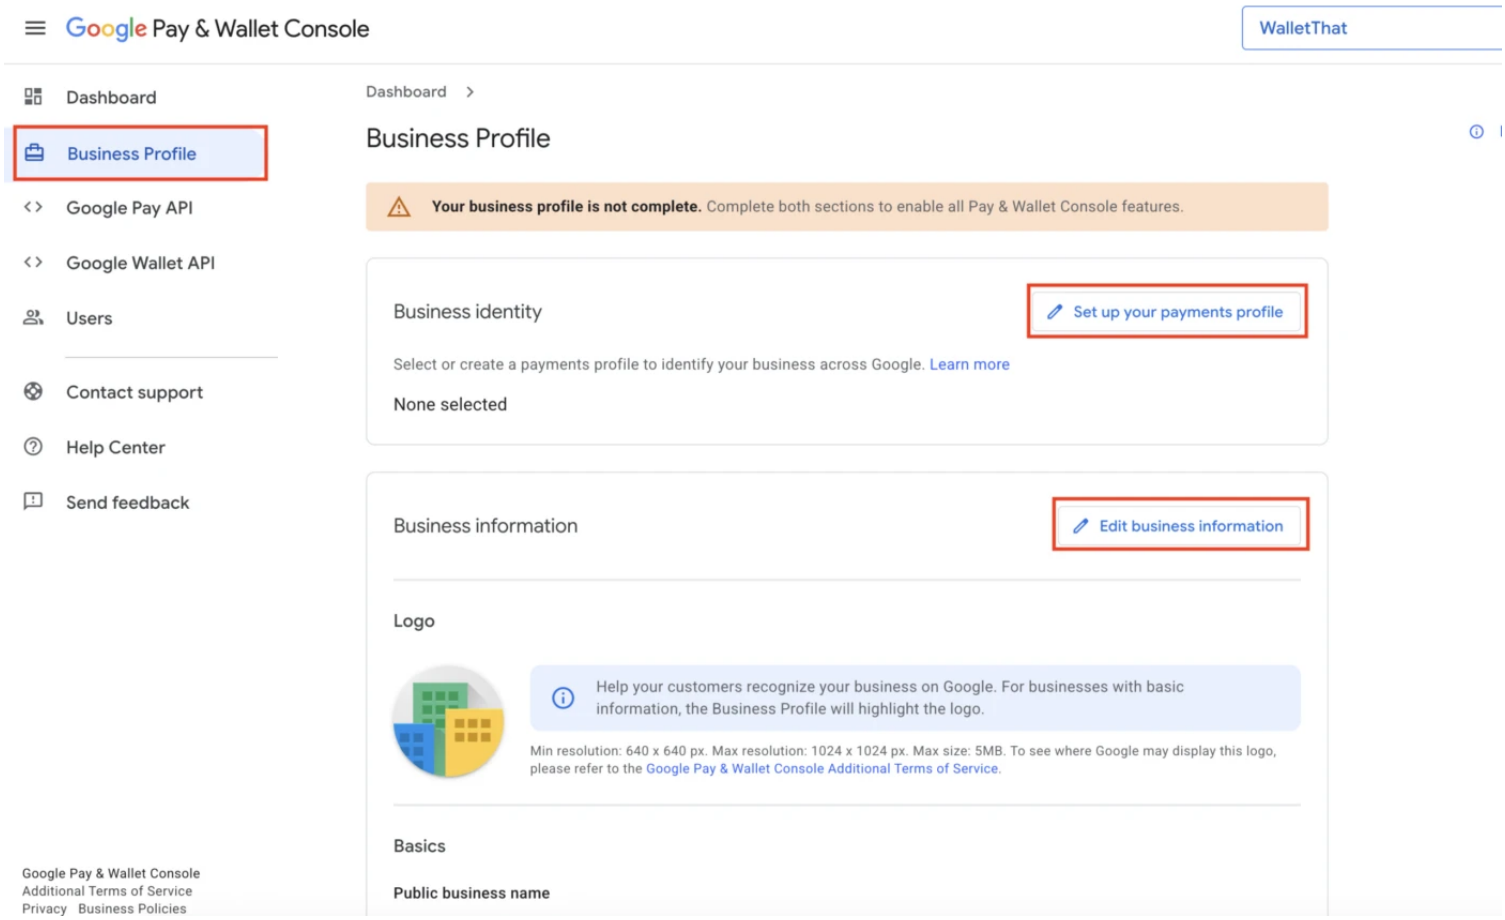

Step 2: Complete your Business Profile

Google requires that all console accounts have a completed business profile. You will need to click the "Business Profile" tab from the left-side navigation. This is broken into two sections:

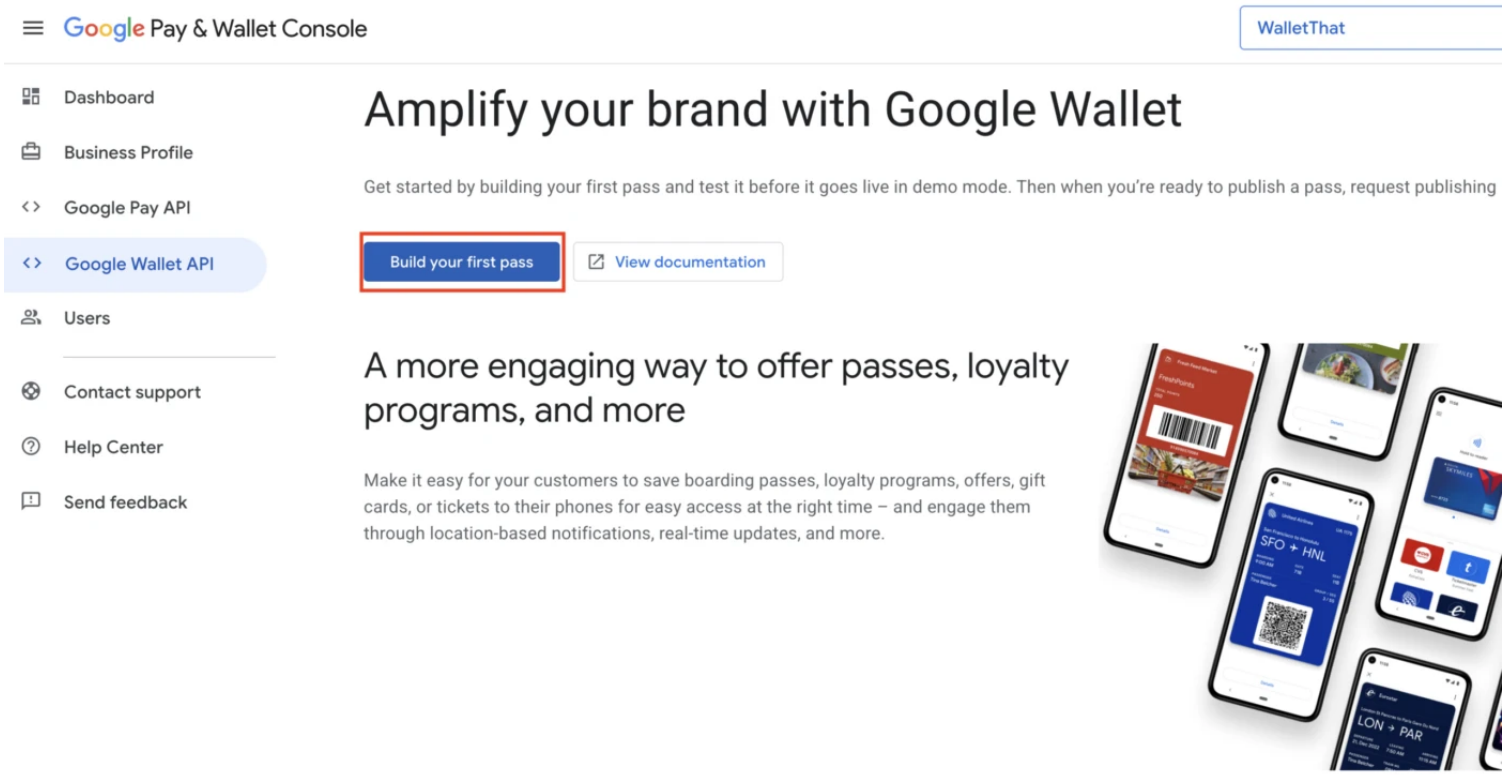

1. Business Identity - This section is completed by clicking "Set up your payments profile" and filling out your business address.

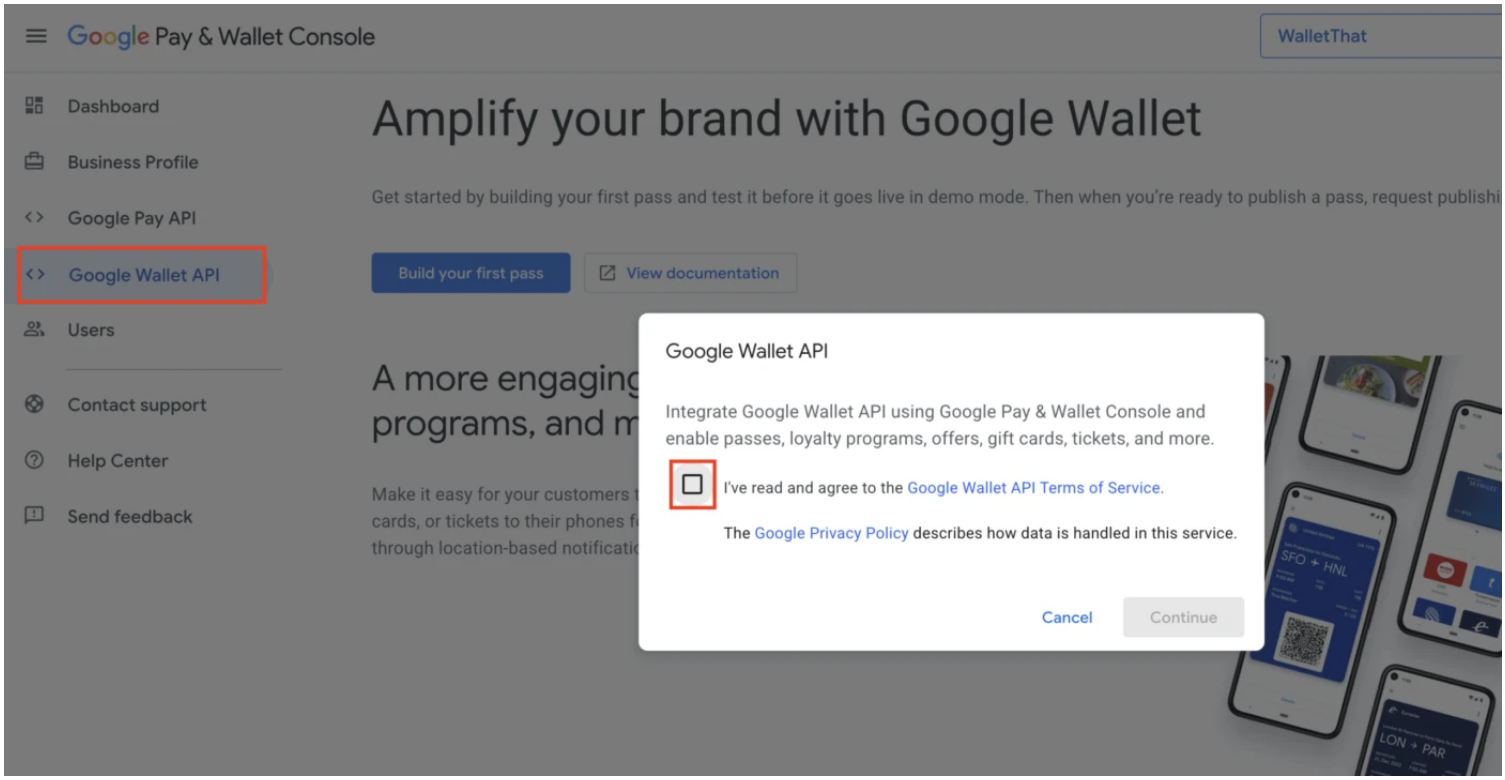

2. Business Information - This section is completed by clicking "Edit business information" and filling out billing details such as website link and customer support information.

Step 3: Navigate to the Google Wallet API Section

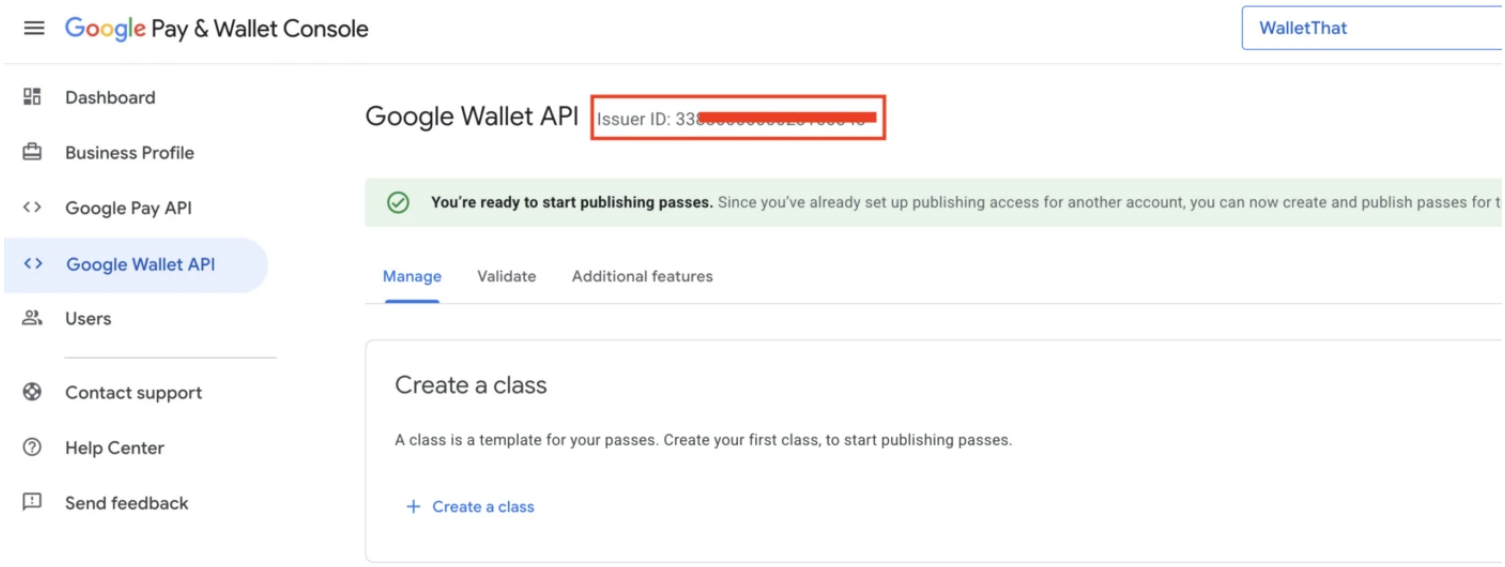

Click the "Google Wallet API" tab from the left-side navigation. You will then need to click "Build your first pass". This will prompt you to agree to Google Wallet's terms and then click "Continue".

Step 4: Find Your Google Wallet Issuer ID

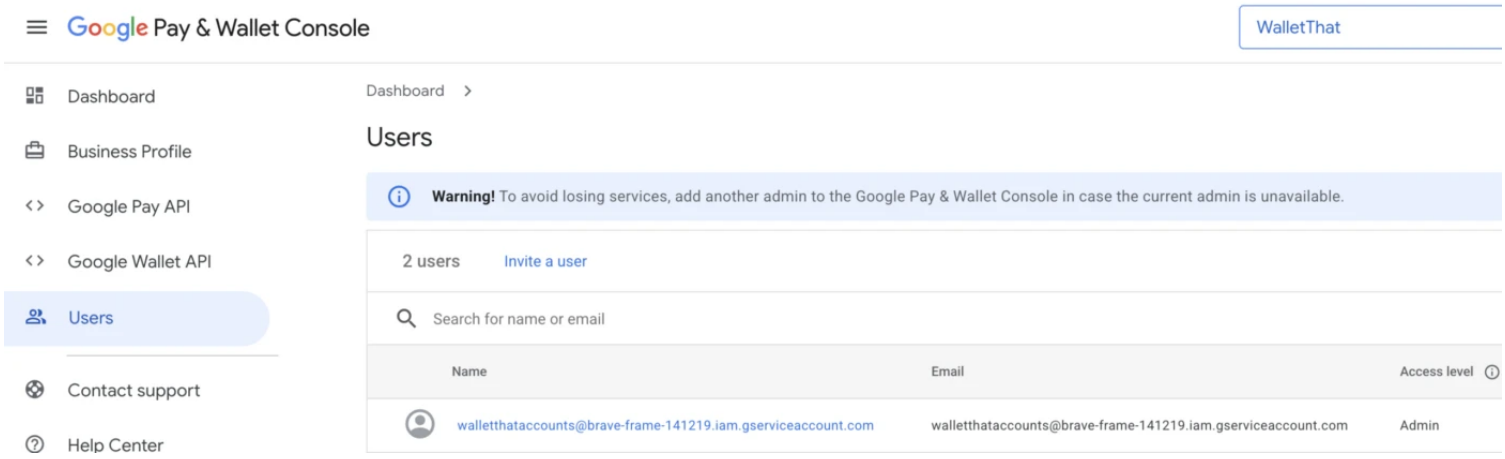

Once you agree to the terms and click "Continue", you will see your Google Wallet Issuer ID on the top of this page. You will need this Issuer ID later to add in the WalletThat platform. Be sure to save this somewhere or copy it.

Step 5: Invite WalletThat's Service Account as a User

Navigate to the "Users" tab in the left-side navigation and click "Invite a user". When prompted, invite WalletThat's service account email address (walletthataccounts@brave-frame-141219.iam.gserviceaccount.com) as an **Admin** user in your console account.

Step 6: Add Your Issuer ID in Your WalletThat Account

To complete the setup process to issue Google Wallet Passes, you will just need to add your Issuer ID in the Apple & Google Wallet Settings page in your WalletThat account. If you need help adding this to your WalletThat account, you can use this article: Apple & Google Wallet Settings
